Investment Objective

BL-Global Equities is an international equity fund. The fund's objective is to grow capital over time by investing in a diversified global portfolio of high-quality companies posting a long-term competitive advantage. To reduce the potential downturn of the fund, the manager has the possibility of adjusting the exposure to equities (between 70% and 100%) by cash and/or hedging.

Key Facts

- Globally diversified portfolio of high-quality companies
- Exposure to equity markets may vary between 70% and 100%
- Particular importance placed on analysis of competitive advantage and valuation
- Derivatives may be used for hedging or portfolio optimisation

Management Report

30/06/2020

Equity markets rebounded for the third month in a row, clawing back most of the decline seen in the first quarter. The stronger-than-expected improvement in economic activity and the central banks' massive asset purchase programmes helped stock markets make gains despite the many pandemic-related uncertainties. The MSCI All Country World Index Net Total Return expressed in euros gained 2.2% during the month, limiting its year-to-date decline to -6.3%. In the United States, the S&P 500 continued its spectacular rally (+1.8% in USD), rebounding by 20% in the second quarter after its 20% slump in the first three months of the year. The Stoxx Europe 600 and the MSCI Emerging Markets rose by 2.8% (in EUR) and 7% (in USD) respectively in June, while the Topix in Japan fell slightly (-0.3% in JPY). In terms of sectors, technology led the field once again, while the defensive consumer staples and healthcare sectors brought up the rear. The scale of the rebound has led to high equity valuations, reducing the potential for future returns and increasing the risk of a correction.

Several transactions took place in the portfolio in June. The US companies Otis Worldwide (elevators) and Carrier Global (air conditioning equipment) were sold. Both these positions resulted from the division of United Technologies into three separate entities in March, one of them (Raytheon Technologies) having been sold in April. The triggers for these two sales were the high valuation of Otis and highly leveraged balance sheet in the case of Carrier.

In Japan, shoe retailer ABC-Mart (profit-taking), industrial groups Hitachi, Air Water and Kubota (slow increase in profitability), pharmaceutical chain Ain Holdings (profit-taking, low liquidity), and fast-growing niche player in medical and industrial fields Asahi Intecc (very expensively valued) exited the portfolio.

In emerging markets, the Brazilian companies Natura Cosmeticos (cosmetics) and WEG (industry) were sold for valuation reasons. S-1 (Korea, security), Cafe de Coral (Hong Kong, restaurant chain), St. Shine Optical (Taiwan, contact lens manufacturer), Odontoprev (Brazil, dental services insurance company) and Grupo Lala (Mexico, dairy company) were sold due to their low liquidity. Korean cigarette manufacturer KT&G and casino operator Sands China were sold due to the weakening of their investment case (tobacco being a shrinking sector and US-controlled casinos in Macau being fully exposed to political risk in the light of growing tensions between the US and China).

Although the positions in Roche, Coca-Cola, Johnson & Johnson, Mondelez, Oracle, PepsiCo, Kimberly-Clark and Canadian National Railway were strengthened, net equity exposure still remained slightly below the lower limit (80%) for this investor profile.

Investment Approach

Investment Principles

Limit losses:

The value of an investment that has lost 50% must double to recover incurred losses.

> *Avoiding losses is more important than realising extraordinary gains.*

Master investment risks:

Risks arise when the parameters of the investment are not properly understood.

> *We avoid investing in assets we do not fully understand.*

Valuation / margin of safety:

The price paid determines the return.

> *The objective is to invest with a safety margin to increase the potential return and limit the risk of loss.*

Consideration of an entire business cycle:

Foregoing part of potential gains in strongly rising markets pays dividends in falling markets.

> *Our objective is to outperform the relevant market indices over an entire business cycle by limiting the drawdown in challenging markets.*

Active management:

The market reference is solely used for performance measurement principles.

> *Owing to the active investment approach of our portfolio management, the portfolio structure may deviate strongly from that of market indices.*

Equity investment approach: “Business-Like Investing” approach

We consider an equity investment as a long-term participation in a quality business. As a consequence, we need to make sure that the businesses we invest in are able to compete successfully within their line of business and remain profitable for the years to come.

Quality

In the first step of our investment process, we perform an in-depth review of the targeted company's business model in order to identify its sustainable competitive advantage. A competitive advantage differentiates the company from its competitors and creates barriers to entry, adding value for its investors.

In the second step we analyse whether the competitive advantage translates into recurrent free cash-flow. We put a special emphasis on the analysis of the maintenance capex requirements of the targeted companies to make sure that the generated cash-flow is not absorbed by investment needs to sustain the company's current business operations.

In the third step, we analyse how the targeted company uses its capital. The company's management faces the following options: investment in current business activities, development of new activities, takeovers, dividend payments, stock buybacks or debt repayments.

Only companies that comply with our bottom-up quality criteria are considered for inclusion into our portfolios, which may lead to significant deviations from the relevant market indices.

Valuation

Even investments in quality companies may result in significant capital losses if the price that was paid for the investment proves too high. To avoid this pitfall, we determine a fair value for each targeted company prior to investing. This fair value is based on the company's normalised free cash flow and serves as reference point for our buy and sell discipline.

Portfolio structure

BL-Global Equities has a diversified portfolio of around 150 companies. The default regional weighting of equities (35% for Europe, 40% for the United States, 10% for Japan, 11.5% for Asia excluding Japan and 3.5% for Latin America) is adjusted according to valuation levels and the manager's opinion on the relative attractiveness of each region. Given the diversified nature of the portfolio and the importance placed on the analysis of competitive advantage and valuation, the specific risk related to an unfavourable movement in an individual stock is contained.

Legal Information

This document is issued by Banque de Luxembourg Investments S.A. ("BLI"), with the greatest care and to the best of its knowledge and belief. However, no guarantee is provided with regard to its content and completeness and BLI does not accept any liability for any losses which might arise from making use of the information contained herein. The opinions expressed in this document are those of BLI at the time of writing and are subject to change at any time without notice.
