#### Investment policy

The fund's objective is to generate long-term capital gains by investing in high-quality companies listed on equity markets anywhere in the world that have a solid sustainable competitive advantage. It aims to generate higher risk-adjusted returns than its benchmark universe over a full market cycle.

A minimum of 30% of the fund's assets will be invested in sustainable assets.

The fund manager implements an active, long-term strategy based on solid convictions.

#### Key features

- An active, fundamental, conviction-based and purely bottom-up approach, oriented towards the long term;
- Constant attention is paid to the quality of the fundamentals and the valuation of the companies included in the portfolio;
- Integration of ESG factors at different stages of the investment process (exclusions, analysis, valuation, monitoring of controversies, voting policy and engagement);
- · Non-benchmarked management resulting in significant deviations from the initial investment universe;
- Low turnover

### Management Report

29/12/2023

The mainstay of the Federal Reserve's policy – reinforcing hopes of monetary easing in 2024 without the onset of a recession – enabled equity markets to continue their rebound after the sharp rise already recorded in November. Thanks to a euphoric year-end, many stock market indices came close to, or even surpassed, their previous records set around two years ago. The MSCI All Country World Index Net Total Return expressed in euros hit a new high after gaining 3.5% in December and 18.1% over full-year 2023. From a geographical perspective, the S&P 500 in the United States rose by 4.4% (in USD) in December, narrowly missing its record level from early 2022. The Stoxx 600 in Europe rose by 3.8% (in EUR) and the MSCI Emerging Markets index by 3.7% (in USD). Penalised by the yen's rebound, the Topix in Japan was the lone faller, down 0.4% (in JPY). In terms of sectors, real estate, industrials and materials benefited most from the prospect of lower interest rates, while the majority of energy, consumer staples and utilities stocks barely participated in the share price rises.

The NAV of BL Global Equities (retail accumulation B share in EUR) increased by 3.8% in December. The fund thus outperformed the MSCI All Country World equity index (+3.5%).

The fund benefited from a general rebound in the smallest market capitalisations in December, which had lagged significantly since the start of the year. US mid-caps Ansys (+23.7%), Idexx Labs (+19.2%), Waters (+17.3%) and Aspen Technology (+16.9%) outperformed significantly over the month. Ansys was buoyed by news that it is in takeover talks with several interested buyers.

On the negative side, defensive consumer and health stocks such as Coloplast (-2.5%), Reckitt Benckiser (+0.4%) and Pepsico (+0.9%) were among the worst performers over the month, as were Swiss stocks SGS (-2.4%) and Nestlé (-1.9%), penalised by the Swiss franc's near 2.5% appreciation against the euro. Notably, some major technology stocks such as Microsoft (-0.8%) and Adobe (-2.4%) were not among the positive contributors to performance.

The fund ended the year with a gain of 17.9%, virtually matching the performance of the MSCI All Country World equity index (+18.1%).

### **Investment Approach**

#### **Investment Principles**

#### Limit losses:

The value of an investment that has lost 50% must double to recover incurred losses.

> Avoiding losses is more important than realising extraordinary gains.

#### Master investment risks:

Risks arise when the parameters of the investment are not properly understood.

> We avoid investing in assets we do not fully understand.

#### Valuation / margin of safety:

The price paid determines the return.

> The objective is to invest with a safety margin to increase the potential return and limit the risk of loss.

#### Consideration of an entire business cycle:

Foregoing part of potential gains in strongly rising markets pays dividends in falling markets.

> Our objective is to outperform the relevant market indices over an entire business cycle by limiting the drawdown in challenging markets.

#### Active management:

The market reference is solely used for performance measurement principles.

> Owing to the active investment approach of our portfolio management, the portfolio structure may deviate strongly from that of market indices.

#### Equity investment approach: "Business-Like Investing" approach

We consider an equity investment as a long-term participation in a quality business. As a consequence, we need to make sure that the businesses we invest in are able to compete successfully within their line of business and remain profitable for the years to come.

#### Quality

In the first step of our investment process, we perform an in-depth review of the targeted company's business model in order to identify its sustainable competitive advantage. A competitive advantage differentiates the company from its competitors and creates barriers to entry, adding value for its investors.

In the second step we analyse whether the competitive advantage translates into recurrent free cash-flow. We put a special emphasis on the analysis of the maintenance capex requirements of the targeted companies to make sure that the generated cash-flow is not absorbed by investment needs to sustain the company's current business operations.

In the third step, we analyse how the targeted company uses its capital. The company's management faces the following options: investment in current business activities, development of new activities, takeovers, dividend payments, stock buybacks or debt repayments.

Only companies that comply with our bottom-up quality criteria are considered for inclusion into our portfolios, which may lead to significant deviations from the relevant market indices.

#### Valuation

Even investments in quality companies may result in significant capital losses if the price that was paid for the investment proves too high. To avoid this pitfall, we determine a fair value for each targeted company prior to investing. This fair value is based on the company's normalised free cash flow and serves as reference point for our buy and sell discipline.

#### Portfolio structure

BL-Global Equities has a diversified portfolio of around 150 companies. The default regional weighting of equities (35% for Europe, 40% for the United States, 10% for Japan, 11.5% for Asia excluding Japan and 3.5% for Latin America) is adjusted according to valuation levels and the manager's opinion on the relative attractiveness of each region. Given the diversified nature of the portfolio and the importance placed on the analysis of competitive advantage and valuation, the specific risk related to an unfavourable movement in an individual stock is contained.
