Investment Objective

The fund's objective is to generate long-term capital gains by investing in high-quality European companies which have a sustainable competitive advantage and a sound ESG (environmental, social and governance) profile. It aims to achieve higher risk-adjusted returns than its benchmark universe over a full market cycle. Alongside these financial goals, impact targets have been set in terms of the portfolio's ESG performance and these are regularly monitored.

The fund manager implements an active, long-term strategy based on solid convictions.

Key Facts

- An active, fundamental, conviction-based approach (30 to 40 stocks), purely bottom-up and oriented towards the long term;
- As well as valuation, constant attention is paid to the financial and ESG quality of the companies in the portfolio;
- Integration of ESG factors at different stages of the investment process (exclusions, analysis, valuation, monitoring);
- Regular review of the valuation of each stock and the average valuation of the portfolio;
- Non-benchmarked management resulting in significant deviations from the initial investment universe;
- Defined and quantifiable impact targets on environmental, social, governance and human rights aspects;
- Low turnover.

Management Report

30/11/2021

The conciliatory tone of the central banks, good employment figures, and upward revisions of earnings estimates were all factors supporting the continuation of the bullish trend that had begun in early October. This momentum was halted by concerns about the rise in Covid cases in many countries. More recently, the discovery of the South African variant Omicron dampened investors' general optimism and the markets were gripped by a new phase of doubt. Pending greater visibility, they are waiting anxiously and investors once again turned to defensive stocks, prompting a strong sector rotation in sustained volumes. In the end, the MSCI Europe Net Return EUR fell by 2.49% over the month. At the same time, risk indicators inevitably rose sharply.

BL Equities Europe was less affected by fears about the new Omicron variant. Its net asset value appreciated by 0.71% over the month.

The biggest gains were recorded by Sika (specialty chemicals for construction), Boozt (online clothing retailing), Sweco (construction engineer), Avast (anti-virus software) and Croda (specialty chemicals). Sika was uplifted by the announcement of the acquisition of MBCC, formerly BASF Construction Chemicals. This acquisition, which Sika had already considered previously, further enhances Sika's product portfolio and will be accretive from year one. Boozt benefited from good results, and especially stable margins. Avast advanced as its acquisition by NortonLifeLock neared completion. Croda, a pharmaceutical ingredients supplier, was buoyed by prospects of sales volume growth for Covid vaccines, boosted by the emergence of the Omicron variant.

On the other hand, the portfolio was penalised by weaker performance from Grifols (human plasma), Adidas (sports equipment), SAP (software), TeamViewer (software) and Hexagon (measuring instruments). Grifols suffered from the announcement of the proliferation of the Omicron variant and consequently from fears of reduced plasma collections in the event of a fresh round of movement restrictions.

During the month, the position in Fresenius was sold and the position in Grifols halved. The positions in Téléperformance, Reckitt Benckiser, Amadeus and Boozt were increased in light of their attractive valuations.

A	0,00%																	
AA	-0,15%																	
AAA	-0,30%																	
<p>Controversies screening</p> <p>Investment candidates and investments are monitored on an ongoing basis to identify substantial ESG events that could affect a company's business model, reputation and thus potentially BLI's investment case.</p>		<p>Controversies follow-up</p> <p>Ongoing monitoring of analysed controversies to assess realised progress.</p>																

Investment Approach

Investment Principles

Limit investment losses

The value of an investment that has lost 50% must double to recover incurred losses
Avoiding losses is more important than generating extraordinary gains

Control company specific risk

Risks arise when the parameters of an investment are not properly understood
We avoid investing in companies we do not fully understand

Valuation monitoring

The price paid for an investment determines its potential return
We monitor the margin of safety to minimize the likelihood of suffering losses on our investments

Consideration of an entire market cycle

Foregoing part of potential gains in strongly rising markets pays dividends in falling markets
Our objective is to outperform the relevant benchmark through an entire market cycle.

Benchmark agnostic

The market reference is solely used for performance measurement principles
Owing to the active investment approach of our portfolio management, the portfolio structure deviates strongly from that of the benchmark.

Equity Investment Approach: Business-Like Investing

We consider an equity investment as a long-term participation in a business. The companies we target enjoy a sustainable competitive advantage that differentiates them from their competitors. They need to show an attractive return profile and generate high and consistent levels of free cash-flow.

Quality

In the first step of our investment process, we perform an in-depth review of the targeted company's business model in order to identify its competitive advantage. Differentiation through a competitive advantage creates entry barriers against competitors and enables a company to better execute its strategy. In the second step we analyse whether the competitive advantage translates into high ROCE and whether the company generates consistent cash-flow. We analyse the maintenance capex requirements of the targeted companies to make sure that the generated cash-flow is not absorbed by investments needed to sustain its current business operations. We emphasize the analysis of the balance sheet and look for companies with a low level of gearing through the cycle.

In the third step, we analyse how the targeted company has used and will use its capital. The company's management faces the following options: investment in current business activities, development of new activities, takeovers, dividend payments, stock buybacks or debt repayments. Only companies that meet our investment criteria are considered for inclusion into our portfolios, which may lead to significant deviations from the market benchmarks.

Valuation

Investments may lead to important capital losses if the price paid for the investment is too high. To avoid this pitfall, we derive a fair value for each targeted company prior to investing. This fair value is based on the company's normalised free cash-flow and serves as reference point for our buy and sell discipline.

We invest in a company, when its stock price offers the most attractive margin of safety, taking into account its development prospects.

Portfolio characteristics

BL-Equities Europe invests in a focused selection of European companies. Targeted companies are typically among the top-3 in their respective markets and offer favourable development prospects. We construct a concentrated portfolio of approximately 35 positions, which allows us to have a good handle of each individual investment, to express our convictions and to minimise errors. Our investment process singles out companies that stand out against their competitors - through an added value product or service, through a good corporate strategy and production process, which underscores high levels of profitability and a healthy financial situation. Portfolio candidates need to enjoy favourable sales growth and / or margin progression prospects.

Our investment choices lead to significant and structural deviations from the fund's relevant market (MSCI Europe NR). We do not invest in all sectors that are represented in the market index. We identify most investment opportunities in the consumer, industrial, health care, chemical and technology sectors. Conversely, there are sectors like financials, utilities or telecom, where we find few - if any - companies that meet our investment criteria. The fund's geographical focus is biased towards Switzerland, Germany, France, Sweden, Denmark and the UK. In terms of market capitalisations, 3/4 of the portfolio are usually invested in companies with a market cap between € 2 and 50 bn.

Our investment strategy has a long-term orientation: our investment cases are constructed with a 3 to 5-year investment horizon. When implementing our bottom-up investment strategy, we do not consider any short term macroeconomic views. Owing to this approach, portfolio turnover rate is low: 25% annual turnover rate is to be expected on average. When making an investment, we are wary of valuation levels of each individual company: at investment, the market price needs to offer a discount against the company's fair value (margin of safety). The average valuation level of the portfolio is also closely monitored.

Portfolio construction rests on three main pillars: the stable core portfolio consists of well-established companies. It is complemented by pockets consisting of growth franchises (focus on growth prospects) and of special situations (focus on turnaround of fundamentals). The portfolio structure is the outcome of individual bottom-up investment opportunities without consideration of the fund's relevant benchmark structure. The weight given to each security in the
