Investment Objective

The objective of the fund is to achieve long-term capital gains and to outperform its relevant market index by investing in Japanese companies benefiting from a sustainable competitive advantage. In order to achieve this objective, the fund manager implements an active investment strategy based on strong convictions.

Key Facts

- Concentrated portfolio of Japanese companies (40-60 securities).
- Bottom-up investment approach with a focus on companies enjoying a strong competitive advantage.
- Significant deviations from its relevant market index in terms of sector and market cap allocations.
- Sound balance between export and domestic oriented companies.
- Low turnover.
- Lower volatility than the market.
- Fully invested.

Management Report

30/11/2021

During the month of November, the BL-Equities Japan (retail share class B Cap in JPY) returned -5.8%, while the MSCI Japan NR returned -2.9%. The market gained during the first three weeks of the month after the LDP won an outright majority of seats in Japan Lower Elections. Investors were also still playing a progressive reopening of the Japanese and global economies. A weaker Yen and talks about a new fiscal package in Japan were also helping sentiment. The market fell back towards the end of November, erasing all the early gains and ending the month lower as the number of Covid cases in Europe was rebounding and as a new virus variant was found, creating concerns it could put the re-opening scenario at risk. While there were no clear trends, high growth stocks did well, with technology and semi-conductor stocks being among the best performers. As for the portfolio, the three major performance contributors were Kobe Bussan, operator of a discount supermarket chain, Disco, manufacturer of equipment used for semi-conductor production, and recently acquired THK, an industrial company specialized in linear-motion equipment. The three major performance detractors were med-tech company Asahi Intecc, Asahi Group, Japan's largest brewer, and Komatsu, the global manufacturer of construction and mining equipment.

The relative performance of the portfolio was particularly disappointing, especially as it came in a down market. This can partially explained by the relatively high weighting in stocks with lower volatility fund and our focus on company valuations, which was not really in line with what investors were prioritizing this month. But performance was also negatively impacted by several individual stocks that reacted to the publication of quarterly results that disappointed investors. In that context, it is important to analyse if these are purely short-term issues or if it puts at risks our long-term investment theses. This earnings season was characterized by companies being impacted by parts shortages, logistics disruptions and input price inflation, while low visibility continues to dampen outlooks. These are issues that should not influence long-term prospects for the concerned companies.

In terms of portfolio management, the position in Meiji Holding was sold to focus on stocks in the same sector that offer more attractive growth profiles. In the "Established Value" category, the position in Astellas Pharma was sold after the stock reached our price target and a new position in Panasonic was initiated. Panasonic is a conglomerate with strong roots in consumer electronics. Its business segments are Appliances (AC, home appliances, kitchen equipment), Life Solutions (LED lightning, energy systems, housing systems), Connected Solutions (avionics, process automation, media solutions), Automotive (infotainment & electronic systems, EV batteries) and Industrial Solutions (electromechanical devices and systems). Panasonic is conducting restructuring measures and transitions to a new holding structure in April 2022 in order to improve its competitiveness and focus on core businesses. Under this new structure, the company will institute autonomous management in each of its divisions, which should enhance the competitiveness of each business. The reforms could also bring new life to Panasonic and enhance enterprise value through a better focus on core areas of strength. A potential overhaul of the noncore portfolio through spinoffs, exits or partnerships with third parties could also help to improve profitability and market perception. Core areas of strength with potential for secular growth include the lifestyle segment, which combines the businesses of appliances and electrical fixtures; the energy segment, which is transforming itself into a technological development business; the connect segment, where the company is quickly building out its connected solutions offerings by means of major acquisitions (e.g. the acquisition of supply-chain management niche leader Blue Yonder). The company should also be able to play a part in solving environmental problems through its energy-saving technologies, rechargeable batteries, and other products and services.

Investment Approach

Investment Principles

Master Investment Risks

Risks arise when the parameters of an investment are not properly understood.

Focus on an entire business cycle

Only over the long term stock markets reflect underlying economic fundamentals

Focus on quality

We invest in companies enjoying a sustainable competitive advantage.

Focus on valuation

The price paid for an investment determines its potential return.

Focus on active management

Portfolio structure deviates significantly from its relevant market index .

Equity Investment Approach: Business-Like Investing

Rationale

We consider an equity investment as a long-term participation in a quality business. Our focus is on companies enjoying a tangible and sustainable competitive advantage ensuring high levels of profitability and strong free cash-flow generation.

Quality

In the first step of our investment process, we perform an in-depth review of the targeted company's business model in order to identify its tangible competitive advantage. A competitive advantage makes it stand out and creates barriers to entry for competitors.

In the second step we analyse whether the competitive advantage translates into high profitability and high levels of free cash-flow. We put a special emphasis on the analysis of the maintenance capex requirements of the targeted companies to make sure that the generated cash-flow is not absorbed by high investment needs to sustain its current business operations.

In the third step, we analyse how the company uses its capital. Company management faces the following options: investment in current business activities, development of new activities, takeovers, dividend payments, stock buybacks or debt repayments. It is important that the company reinvests its cash flow in activities that offer a similar or better return potential than its current businesses.

Valuation

Even investments in quality companies may lead to significant capital losses if the price paid for the investment is too high. To avoid this pitfall, we derive a fair value for each targeted company prior to investing. This fair value is based on the company's normalised free cash-flow and serves as reference point for our buy and sell discipline.

We only initiate a position if the company's stock price offers a discount against its fair value.

Portfolio characteristics

BL-Equities Japan's investment portfolio consists of 40 to 60 stocks that meet our quality and valuation criteria.

Investments are concentrated in defensive sectors, such as health care or consumer goods as well as sectors in which Japanese companies benefit from significant competitive advantages (industrials, materials, technology). On the other hand there are sectors like financials, utilities or telecom where we find few - if any - companies that meet our criteria.

The portfolio of BL-Equities Japan tends to be geared towards mid-sized companies. In this market segment we find many candidates benefiting from competitive advantages in market niches. The large cap market segment of the Japanese stock market tends to be dominated by large industrial conglomerates, financial holdings and automobile companies that do not comply with our investment criteria.

While the portfolio structure (by sectors, market cap, ...) is purely the outcome of individual investment decisions, we differentiate between export-oriented and domestic companies. Since these two types of companies are influenced by different external factors, their market reactions also tend to be very different. In order to master the volatility level of the fund, we make sure to have a sound balance between the two types of companies.

We are convinced that our strategy to limit our investments to quality companies benefiting from a strong competitive advantage results in a superior risk - return profile compared to the benchmark over an entire market cycle.
