Attribution results are calculated over a trailing 12 month period or since inception (if data is less than 12 months). Attribution is intended to demonstrate trends in performance due to security selection and sector/country allocation and is calculated from the underlying segregated asset positions and may not add up to the total portfolio return calculated using the NAV of the fund. Fund sector/country weights in the attribution table are based on beginning market values, adjusted for purchases and sales activities during the year.

## Value added chart

Value added calculation is based on performance of Class O (acc) USD shares.

\* Since Inception performance is calculated from the first month-end following Class O (acc) USD inception.
